

# Is your data safe?

Learn how to protect your business

## We can...

Recover data in as little as 6 mouse clicks

Eliminate unreliable tape backup

Prepare your business for a disaster

## Can You Identify the Risks to Your Business?

Every business and organization can experience a serious incident which can prevent it from continuing normal operations.

This can happen any day at any time. The potential causes are many and varied:

- Earthquake
- Fire
- Flood
- Explosion
- Computer malfunction
- Accident
- Grievous act...

The list is endless.

## Introducing Our Disaster Recovery and Data Protection Program

- Do you struggle to maintain your current tape backup system?
- Are you sure that in the event of data loss or a server failure that you can get your critical applications back quickly?

We find that most small businesses have not tested their data protection system, and many do not find out that their data is unrecoverable until they have encountered data loss!

DataConnect is a secure Business Continuity service that recovers files in minutes, servers in an hour, and your applications and data in 1-2 days.
